A Conspiracy Tale

Bryan Collier

2008 is a time of great political unrest; people are living in constant fear of a terrorist attack and are looking to world leaders to take action. Suspicion of local government runs high and conspiracy rumours abound.

Mitchell Webb, Chief Executive of IDSys, and his colleagues have secured a government contract for the design, manufacture and supply of Radio Frequency Identification Devices (RFIDs), which are to be introduced to protect the British public against terrorists. It's the biggest deal in the company's relatively short history.

But it's not long until a horrendous attack on one of England's most famous structures prompts the government to pass legislation for the compulsory introduction of RFIDs, drawing an unsuspecting Mitch and his colleagues into the biggest conspiracy in the history of the planet. They soon uncover some unsettling information that makes them question the real motives behind the RFID Programme, and Mitch's suspicions come to a head when a friend is killed in an 'accident' during the mysterious Bilderberg Group Conference.

Mitch is forced to make some desperate decisions as he and his colleagues find themselves in a deadly race against time, facing a powerful and ruthless enemy, culminating in an astonishing discovery about the very origins of life on Earth.

About the Author: Bryan L Collier was an electronic engineer for 20 years, and has worked on Military Electronics at Ferranti, Marconi and BSI. He also spent five years at Motorola, in the UK, US and China. He completed an MBA at Bristol Business School in 2003 and has since worked as a Business Consultant/Programme Manager for a number of financial organisations. His interests include ancient history, science and quantum physics.
